General Information

George C. Chang Chien provides customized training tailored to meet your individual or group needs. Training will cover diagnostic and procedural ultrasound as used in interventional pain, musculoskeletal, and regenerative medicine.

Training will provide you with the knowledge needed to safely and effectively grow your ultrasound skills.

Educational Highlights

Ultrasound-Guided Procedures

- Shoulder: Glenohumeral joint, acromio-clavicular Joint, Subacromialsubdeltoid bursa injection, rotator cuff interval injection, biceps tendon sheath injection, suprascapular nerve block.
- Elbow: elbow joint, extensor tendinopathy tenotomy, flexor tendinopathy tenotomy, cubital tunnel block.
- Wrist: carpal tunnel injection, flexor tendon sheath injection, trigger finger (A1 pulley), carpometacarpal injection.
- Hip: Femoral-acetabular joint injection, iliopsoas bursae injection, gluteus medius bursa injection, Sacroiliac Joint injection, piriformis injection, ilioinguinal and iliohypogastric nerve block.
- Knee: Suprapatellar approach, sub-patellar approach, femoral-tibial approach, bakers cyst aspiration, pes anserine bursa injection, iliotibial band injection.
- Head and Neck: Occipital nerve block, stellate ganglion (3 approaches), cervical selective nerve root block.
- Foot/ankle: Achilles Tendon, Plantar Fascia injection, mortons neuroma, 1st MTP.
- Caudal epidural injection.
and more!

Procedural techniques for Regenerative Medicine including:

Percutaneous tenotomy for treatment of tendinosis

Ultrasound evaluation of tendinopathy, chondromalacia, osteoarthritis, and infection.

Diagnostic Ultrasound encompassing musculoskeletal ultrasound for common orthopedic and neurologic conditions.
